SKILLS

HTML/ CSS
JavaScript (jQuery , Node.js)
Git
REST APIs

CAREER OBJECTIVE

Currently attending Denver University Coding Bootcamp to transition into being a professional full stack web developer. I am a highly motivated individual who is passionate about web development ,who has experience with languages such as CSS and JavaScript and knows how to work with libraries such as Node.js and React. I have a very strong background of working and communicating with a team.

PROJECTS

ISS Locator

Co - Creator / February 2021 - current

- Created the functionality in the dynamic tracked location of the ISS using a third party API.
- Created the functionality of accepting user input for city and making a new pin on our map for the city the user inputted.
- Created the functionality of dynamically displaying to the user when the ISS will pass over the city that they inputted.

JavaScript Quiz

Creator / February - current

- Created Event Listeners to either start the functionality of the quiz , submit their initials with score and to display all the save scores.
- Created functionality to check if user selected the right answer. And if they did not, to subtract 10 seconds from their time.
